

# Mechanical Services & Predictive Maintenance

Our experienced and qualified technicians are available 24/7 for both on-site and in-shop mechanical services. We use top-of-the-line and cutting edge technology to complement our years of experience in the field.

## Motor Vibration Analysis

- Vibration Analysis observes changes in the condition of all your rotating equipment.
- Early detection of any problems can allow corrective action to be taken before a catastrophic failure occurs.
- Vibe-expert (2 units available)

Did you know most motor downtime can be avoided with a predictive maintenance program?

Contact our Mechanical Service experts to find out how your business can save money and downtime expense.

## Laser Alignments

- High quality motor laser alignment for motors used in commercial, industrial, and manufacturing facilities.
- Skilled technicians use the best equipment and years of experience to diagnose and repair your critical motors.
- On-site motor laser alignment.
- Rotalign pro (3 available)

## More Services

- Emergency fabrication and repairs on-site (fans and blowers).
- Portable welders and presses available on-site.

# 24/7 service

## PdMA Advanced Diagnostics

- Our highly trained technicians use this tool to diagnose problems on the job site that would traditionally require the motor to be completely disassembled.
- Data gathered with this tool over a period of time delivers important trending information that can be used to schedule maintenance downtime and avoid costly motor failure.
